Project 1

Waymo

2024

Waymo – Self-Driving Cars – Autonomous Vehicles – Ride-Hail

What We Do

First fully autonomous ride on public roads. We explored what self-driving cars could be with the Firefly. These cars had custom sensors, computers, steering, and braking, with no steering wheel or pedals. That year, our friend Steven Mahan took the world's first fully self-driving ride on public roads in Austin, TX. Steve is legally blind.

Contribution

Contributed to the Waymo autonomous-driving and ride-hailing project, focusing on UI/UX design and frontend development for responsive, data-driven dashboards and applications. Designed wireframes, layouts, prototypes, and reusable ReactJS and Material UI components, ensuring usability, accessibility, responsiveness, and visual consistency. Developed workflows using Node-RED, REST APIs, and SQL for data processing and dynamic data presentation. Leveraged AI-assisted development and documentation to improve technical documentation of UI components, workflows, APIs, and requirements, while collaborating with developers, QA engineers, designers, and stakeholders across development, testing, debugging, and production support.

Technology Stack: ReactJS | JavaScript / TypeScript | Material UI | Node-RED | SQL | REST APIs | HTML5 | CSS3 | UX/UI Design | Responsive Design | AI-Assisted Development | Prompt Engineering | LLM Applications | AI-Assisted Documentation | Generative AI | Git/GitHub

Project 2

Wigginslift

2025

Wiggins Lift Co., Inc. | Manufacturer of custom, high-capacity forklifts

What We Do

Wiggins Lift Co. is a manufacturer of high-capacity, specialized material-handling equipment and forklifts designed for demanding applications. The company develops customized equipment for industries including marine/marina operations, agriculture, mining, construction, and military applications, with products such as Marina Bull, Yard Bull, electric forklifts, tire manipulators, telehandlers, and multi-purpose trucks. Wiggins focuses on engineering machines around specific customer requirements, emphasizing lifting capacity, stability, safety, durability, maneuverability, and customized configurations.

Contribution

Contributed to the UX design and UI development of a web-based fleet and asset management platform for Wiggins Lift, focusing on creating intuitive, data-driven interfaces for monitoring and managing connected vehicles and operational information. Designed dashboard experiences, organization lists, organization details, asset lists, asset details, fault history, trip history, and trip-view screens, with emphasis on clear information hierarchy, easy navigation, data visibility, and efficient user workflows.

Project 3

Wenzel

2026

WENZEL Group – Industrial measurement technology

What We Do

WENZEL Group is a global provider of industrial measurement and quality-assurance solutions, serving industries such as automotive, aerospace, mechanical engineering, medical technology, and defense. The company develops 3D coordinate measuring machines (CMMs), gear and shaft measuring systems, industrial CT systems, optical and tactile sensors, mobile measurement solutions, and measurement software that help manufacturers inspect components, verify dimensional accuracy, optimize production processes, and maintain consistent product quality. WENZEL also provides customized measurement solutions and software for integrating inspection into manufacturing environments.

Contribution

Contributed to the UX design and UI development of the WENZEL Group web application, focusing on creating a consistent, intuitive, and responsive user experience across key modules. Designed and developed landing pages, login pages, user management, change-password workflows, interface layouts, and build-up pages, translating business requirements and UX concepts into clean and user-friendly interfaces. Established and maintained a structured UI style guide and design system, including typography, spacing, components, buttons, forms, colors, layouts, and interaction patterns, while developing a consistent theme and reusable UI components to ensure visual consistency, scalability, accessibility, and maintainability across the application.

Project 1

Hyfra

<https://www.hyfra.com/de/>

2022

What We Do

HYFRA is a specialist in customized industrial process-cooling solutions, developing and manufacturing cooling systems for demanding industrial applications. Its solutions are used in areas such as laser technology, machine tools, filtration, automotive, aerospace, metal processing, additive manufacturing, hydrogen applications, and battery energy storage. HYFRA provides products ranging from compact chillers to fully customized cooling systems, helping manufacturers maintain precise temperatures, improve process stability, reduce energy consumption, and increase production efficiency. The company also provides engineering, installation, commissioning, maintenance, training, and service throughout the lifecycle of its cooling systems.

Contribution

Contributed to UX design and UI development for SAP Hybris 6.4 B2B/B2C e-commerce applications, delivering responsive, intuitive, and reusable storefront experiences. Designed wireframes, page layouts, navigation flows, mockups, prototypes, and UI components, and developed/customized CMS components, content slots, product listing/detail pages, search and navigation, checkout flows, forms, account pages, email templates, responsive grid systems, and reusable frontend modules using Bootstrap 3.6+. Focused on usability, accessibility, visual consistency, responsive design, performance, and cross-browser compatibility, including Internet Explorer. Customized OOTB Hybris functionality, JSP/WCMS templates, automatic template merging, and reusable UI patterns to support diverse business requirements.

Configured and customized Product Cockpit, CMS Cockpit, SmartEdit, and Backoffice, enabling content management, product administration, and business-user workflows. Implemented and configured Hybris AddOns and extensions, including SmartEdit, Captcha, Customer Interests, and Wishlist functionality. Integrated SAP Hybris with SAP ERP and third-party systems using REST APIs and OCC (OmniCommerce Connect), supporting dynamic product, customer, order, and content data. Worked closely with UX designers, backend developers, QA engineers, architects, and business stakeholders throughout requirements analysis, UX/UI implementation, API integration, testing, debugging, code reviews, performance optimization, deployment, documentation, and production support, with emphasis on clean code, modular architecture, component reusability, maintainability, and consistent user experience.

Technical Skill Set: SAP Hybris 6.4 | B2B/B2C E-commerce | CMS | WCMS | Product Cockpit | CMS Cockpit | SmartEdit | Backoffice | OOTB Customization | AddOns & Extensions | JSP | OCC

Project 2

KYSOR Warren

<https://www.kysorwarren.com/en>

2023

What We Do

Kysor Warren is a commercial refrigeration company that designs and manufactures refrigerated display cases, refrigeration systems, and related equipment for supermarkets, grocery stores, convenience stores, foodservice businesses, and other retailers across North America. Its solutions are used to safely store and merchandise products such as dairy, meat, frozen foods, produce, beverages, and prepared foods, with a focus on reliability, energy efficiency, sustainability, and flexible store layouts. The company also provides customized refrigeration systems, engineering, technical support, and service to meet specific customer and store requirements.

Contribution

Contributed to the Kysor Warren digital application and e-commerce platform, with a primary focus on UX design and ReactJS-based UI development. Designed and developed intuitive, responsive, and user-friendly interfaces for refrigeration and retail-focused business workflows, translating business requirements and UX concepts into high-quality frontend experiences. Created wireframes, page layouts, navigation flows, reusable components, forms, dashboards, data-driven screens, and responsive designs, with emphasis on usability, accessibility, consistency, and performance. Developed scalable UI components using ReactJS, JavaScript/TypeScript, Material UI, Bootstrap 3.6+, HTML5, and CSS3, following component-based architecture and reusable design patterns.

Worked on integrating frontend interfaces with REST APIs and backend services, enabling dynamic product, customer, and operational data presentation. Leveraged ReactJS reusable components, state management, API integration, responsive grid systems, cross-browser compatibility, and frontend performance optimization to deliver maintainable applications. Collaborated closely with UX designers, backend developers, QA engineers, product owners, and business stakeholders throughout requirements analysis, UX/UI design, development, testing, debugging, code reviews, and production support.

Technical Skill Set: ReactJS | JavaScript | TypeScript | Material UI | Bootstrap 3.6+ | HTML5 | CSS3 | REST APIs | Responsive Web Design | UX/UI Design | Wireframing | Prototyping | Design Systems | Component-Based Architecture | API Integration | Cross-Browser Compatibility | Git | Jira | VS Code

Project 1

Heatcraft Refrigeration – Middle east

2019

<https://www.heatcrafttrpd.com/>

What We Do

Heatcraft Refrigeration Products develops and manufactures commercial and industrial refrigeration systems used across food service, supermarkets, cold storage, and industrial environments. Its portfolio includes unit coolers, condensing units, condensers, refrigeration racks, packaged systems, refrigeration controls, and related components, supported by engineering, technical training, installation, troubleshooting, and customer-service resources.

Contribution

Contributed to UX design and UI development for B2B/B2C e-commerce solutions using SAP Hybris, delivering responsive and reusable storefront experiences. Developed storefront pages, CMS components, content slots, forms, navigation, email templates, and UI components, and customized Product Cockpit, CMS Cockpit, SmartEdit, and Backoffice. Integrated SAP ERP and third-party systems using REST APIs and OCC, collaborating with UX, backend, QA, and business teams across design, development, testing, and production support.

Technical Skill Set: SAP Hybris 6.4 | B2B/B2C E-commerce | CMS | WCMS | SmartEdit | Backoffice | Product Cockpit | CMS Cockpit | JSP | OCC | ReactJS | JavaScript | TypeScript | HTML5 | CSS3 | Bootstrap 3.6+ | Material UI | REST APIs | Responsive Web Design | UX/UI Design | Wireframing | Prototyping | Design Systems | Component-Based Architecture | Git | Azure DevOps | VS Code

Project 2

Heatcraft – Intelligen

2020

<https://intelligen.heatcrafttrpd.com/>

What We Do

intelliGen™ is Heatcraft's electronic refrigeration control platform designed to provide reliable temperature management, automated defrost, evaporator fan and superheat control, system monitoring, and easier servicing. It features a user-friendly interface with full-text displays, quick-menu controls, LED status alerts, guided setup, automatic data logging, and security controls. With optional webserver and integration capabilities, users can remotely monitor refrigeration systems, receive web, SMS, and email alerts, and connect with Building Management Systems (BMS), helping technicians and operators diagnose issues, maintain product conditions, and improve energy and operational efficiency.

Contribution

Contributed to the UX design and UI development of the intelliGen™ refrigeration control platform, designing responsive dashboards, monitoring screens, equipment/status views, alerts, configuration pages, forms, and reusable UI components. Developed CMS components, content slots, JSP/WCMS templates, and OOTB customizations, with focus on usability, accessibility, responsive design, visual consistency, and component reusability. Collaborated with UX designers, developers, QA engineers, and stakeholders throughout the development lifecycle.

Technical Skill Set: ReactJS | JavaScript | TypeScript | Material UI | Bootstrap 3.6+ | HTML5 | CSS3 | SAP Hybris 6.4 | CMS | WCMS | SmartEdit | JSP | REST APIs | Responsive Web Design | UX/UI Design | Wireframing | Prototyping | Design Systems | Component-Based Architecture | Git | Azure DevOps | VS Code

Project 3

Heatcraft – Brazil

2021

<https://www.heatcrafttrpd.com/>

What We Do

Manufacturer of refrigeration and heating equipment for clients in the foodservice, supermarket, cold storage, and industrial markets. The company offers remote condensers, evaporators, condensing units, integrated system and other climatic control system

Contribution

Contributed to UX design and UI development for Heatcraft's commercial refrigeration platforms, designing responsive product catalogs, product details, dashboards, configuration tools, search, filters, forms, and support workflows. Developed reusable UI components using ReactJS, JavaScript/TypeScript, Material UI, Bootstrap, HTML5, and CSS3, with focus on usability, accessibility, consistency, and performance. Collaborated with UX, development, QA, and business teams across wireframing, prototyping, UI development, API integration, testing, and production support.

UI Development Roles

ReactJS | JavaScript | TypeScript | Material UI | Bootstrap 3.6+ | HTML5 | CSS3 | Responsive Web Development | Reusable UI Components | Component-Based Architecture | CMS Components | REST API Integration | Cross-Browser Compatibility | Frontend Performance Optimization | SAP Hybris 6.4 | SmartEdit | WCMS | JSP | Git | Azure DevOps

Lennox India - Website

<https://www.lennoxindia.com/>

2017

What We Do

Lennox India is a technology and engineering organization supporting Lennox's global HVAC business through product engineering, software development, digital solutions, R&D, and technology services. The organization works on solutions related to heating, ventilation, air conditioning, climate control, connected HVAC systems, monitoring, automation, and data-driven technologies, supporting residential, commercial, and industrial applications.

Contribution

End-to-end UX design and UI development of the newly implemented Lennox India company website, focusing on delivering a modern, responsive, intuitive, and visually consistent digital experience across desktop, tablet, and mobile devices. Translated business objectives, user requirements, and design concepts into structured website experiences by defining user flows, information architecture, navigation patterns, page layouts, wireframes, mockups, interactive prototypes, and reusable UI components. Established consistent design patterns for typography, spacing, grids, forms, buttons, navigation, content sections, and responsive layouts to create a cohesive and scalable website experience. Collaborated closely with UX designers, product owners, business stakeholders, and backend developers throughout the design and development lifecycle, ensuring effective communication between design and implementation. Conducted design reviews, usability validation, and iterative improvements based on stakeholder and user feedback. Focused on usability, accessibility, responsive behavior, visual consistency, component reusability, frontend performance, and cross-browser compatibility while ensuring designs were accurately translated into production-ready interfaces and seamlessly integrated with backend services.

Roles & Responsibilities

Worked as a Trainee, supporting UX Design and UI Development activities including hand-drawn sketches, wireframes, layouts, mockups, templates, and final UI designs. Contributed to user interaction design through storytelling, user flows, usability testing, information architecture, content strategy, and spacing/layout planning. Assisted in UI development by translating UX designs into structured page layouts, grid systems, page flows, animations/transitions, responsive designs, and quality-focused frontend implementations. Participated in industry-standard training sessions, technical learning programs, team communication, and knowledge-sharing activities to build practical skills in UX, UI, and software development.

Project 2

Lennox India - S40 | E30 Smart Thermostat

<https://www.lennoxindia.com/>

2018

What We Do

Lennox develops advanced HVAC and climate-control solutions, including smart thermostats and connected home-comfort systems such as the iComfort Smart Thermostat. These products provide touchscreen controls, Wi-Fi connectivity, programmable temperature management, geofencing, system communication, and intelligent comfort control, helping users manage heating and cooling efficiently while improving convenience, energy management, and overall indoor comfort.

Contribution

Contributed to the UX design of Lennox smart HVAC and thermostat solutions, focusing on creating intuitive, user-friendly, and consistent experiences for temperature control, system monitoring, scheduling, and connected-device management. Conducted UX activities including user flows, information architecture, hand-drawn sketches, wireframes, page layouts, mockups, and interactive prototypes. Focused on clear navigation, content hierarchy, spacing, usability, accessibility, and responsive design to simplify complex HVAC controls and improve the overall user experience. Collaborated closely with product stakeholders, UX/UI designers, business teams, and developers to understand requirements, translate user needs into design solutions, and refine experiences through design reviews and usability testing. Iterated designs based on feedback and validation, maintaining consistency across screens and workflows while following established UX principles, design guidelines, and industry standards. Supported design handoff by providing clear layouts, interaction details, and specifications for development implementation.

Roles & Responsibilities

Primarily responsible for UX Design activities, including hand-drawn sketches, wireframes, layouts, mockups, and user interaction design. Contributed to storytelling, user flows, usability testing, information architecture, content strategy, visual hierarchy, and spacing to create intuitive and user-centered experiences. Participated in industry-standard UX training sessions, design workshops, team discussions, and knowledge-sharing activities to strengthen practical UX design skills.

Memory/RAG

Security architecture

Performance/latency optimization

Electron ↔ Chromium ↔ React communication

Failure recovery and verification

Production deployment

Project 1

AI-Native Agentic Browser

Local Environment

Present ●

What I Did

Electron · React · TypeScript · Chromium · Playwright · MCP · LLMs · Vector DB

- Architected and developed an AI-native desktop browser combining Electron, React, TypeScript, and Chromium with an autonomous agent runtime.
- Built an agent execution pipeline for browser tasks using observation → planning → tool selection → action → verification → recovery.
- Integrated Playwright-based browser automation for navigation, DOM interaction, form filling, multi-tab workflows, screenshots, and task verification.
- Designed an MCP-based tool architecture enabling the agent to discover and securely invoke external tools and services.
- Implemented DOM, accessibility-tree, and visual page perception to provide structured webpage context to AI models.
- Developed model routing across fast, reasoning, vision, and embedding models to reduce latency and optimize inference cost.
- Implemented short-term, episodic, and semantic memory with vector retrieval for context-aware agent tasks.
- Designed a secure credential system using OS-level secure storage for username/password auto-login without exposing secrets to the LLM.
- Built permission and human-approval controls for sensitive actions such as purchases, account changes, messages, and credential operations.
- Implemented Electron security architecture using context isolation, sandboxing, secure preload APIs, and validated IPC boundaries.
- Designed task lifecycle management with pause/resume/cancel, retries, action verification, failure recovery, and observability.
- Optimized agent performance through context caching, incremental page observation, parallel safe tool execution, streaming, and context compression.

“ IF a personal AI assistant designed to understand my intent, handle my daily tasks, automate workflows, and act on my behalf—with my permission. ”
